Lecture	6h00	Mid-term	50 %
Practical tutorial	30h00	Final Exam	50 %
Face to Face Total	36h00		
Individual Work	44h00		
Student Total	80h00		

Detailed Module Description

General Objective (EN)

This course provides a critical understanding of, and applied practice in, building performance simulation with an emphasis on energy modeling. This emerging field utilizes quantitative data to evaluate sustainability design goals and energy code compliance in buildings, as implemented jointly by architects and engineers. Course topics cover basic building systems, how their use of energy is calculated, and how their performance can be measured, characterized, and optimized. Students will develop working competence in one of the most popular building modeling tools, Pleiades, and with a set of skills that will be applicable regardless of the specific simulation tool being used.

Content (EN)

- Basics of thermal simulation:
 - Principles of thermal simulation
 - Role of thermal simulation in building design
 - Building thermal characteristics and performance criteria
- Approaches to thermal modeling of the building
 - Dynamic thermal simulation tools:
 - Presentation of dynamic thermal simulation tools
 - Simulation capabilities, building input and results
- Realization of dynamic thermal simulation:
 - Modeling of the building (architecture, uses, materials, air flow...)
 - Study of the thermal performance of the building (heating and cooling needs, interior temperature, thermal comfort...)
 - Study of solutions to improve the energy performance of the building (orientation, glazed surface, insulation, waterproofing...)

Prerequisites (EN)

Thermodynamics, Heat transfer

Bibliography (EN)

- AIA An Architects Guide to Integrating Energy Modeling in the Design Process (free download after registration, <http://info.aia.org/aia/energymodeling.cfm>)
- ASHRAE Handbooks (Fundamentals, HVAC Systems & Equipment, Applications—various years)
- ASHRAE AEDG (Advanced Energy Design Guide): SMALL OFFICE BUILDINGS (free download after registration, go to [ASHRAE AEDG](#))

ASHRAE.org and search "advanced energydesign guides" or google directly)

Targeted Skills (EN)

- 1- Conduct building energy and mass transfer analysis using comprehensive computer simulation tools.
- 2- Evaluate the performance of building envelope and environmental systems considering energy and mass transfer in building.
- 3- Ability to apply models to common building industry functions such as comparison of design features, selection of equipment, energy audits and retrofits, code compliance

Pedagogical Methods (EN)

- 1- Enseignement en face à face
- 2- Pédagogie par projets

Module Layout

Session	Type	Duration	Individual Work	Theme
1	Lecture	1h30		Heat balance (conduction, convection, radiation)
2	Practical tutorial	1h30		Exercises for calculating losses
3	Practical tutorial	1h30		General presentation + tools / Exercise (1/3) - Library entry
4	Lecture	1h30		Solar contribution + thermal balance
5	Practical tutorial	1h30		Exercises to calculate solar heat gain and heating needs (simplified method)
6	Practical tutorial	1h30		Exercise (2/3) - Alcyone input / First simulations
7	Lecture	1h30		Ventilation + aeraulic network
8	Practical tutorial	1h30		Natural ventilation + network balancing exercises
9	Practical tutorial	1h30		Rehabilitation Project Montreuil (1/13) - Diagnosis of the existing
10	Practical tutorial	1h30		Rehabilitation Project Montreuil (2/13) - Diagnosis of the existing
11	Lecture	1h30		Comfort + STD
12	Practical tutorial	1h30		Exercise to solve the balance equation of a thermal zone
13	Practical tutorial	1h30		Exercise (3/3): Comfort analysis and processing, and advanced features
14	Practical tutorial	1h30		Rehabilitation Montreuil Project (3/13) - Evaluation of solutions
15	Practical tutorial	1h30		Rehabilitation Montreuil Project (4/13) - Evaluation of solutions
16	Practical tutorial	1h30		Rehabilitation Montreuil Project (5/13) - Finalization of "classic" study
17	Practical tutorial	1h30		Rehabilitation Montreuil Project (6/13) - Finalization of "classic" study
18	Practical tutorial	1h30		Rehabilitation Montreuil Project (7/13) - Extension ASAI
19	Practical tutorial	1h30		Rehabilitation Montreuil Project (8/13) - Extension ASAI
20	Practical tutorial	1h30		Rehabilitation Project Montreuil (9/13) - Economic calculations
21	Practical tutorial	1h30		Rehabilitation Project Montreuil (10/13) - Economic calculations
22	Practical tutorial	1h30		Rehabilitation Project Montreuil (11/13) - Environmental calculations
23	Practical tutorial	1h30		Rehabilitation Project Montreuil (12/13) - defense or report
24	Practical tutorial	1h30		Rehabilitation Project Montreuil (13/13) - defense or report
